

ABSTRACT

A terminal table unit includes: a terminal table (10) having a metal terminal (12) at its lower surface for connecting a lead wire (60); an insulation plate (20) adhered to the lower surface of the terminal table and having a hole (20-1) at a portion corresponding to the portion containing a metal terminal and its surrounding region; and a metal plate (30) having an upper surface adhered to the lower surface of the insulation plate and having a through hole (30-2) reaching from the upper surface to the lower surface. Through the through hole (30-2), the lead wire is brought out to the lower surface of the metal plate. The terminal unit has a contact surface between the insulation plate containing the hole (20-1) and the terminal table, a contact surface between the insulation plate and the metal plate, and the through hole (30-2) which are filled with adhesive and unified by a bolt (40).
